

Say Goodbye to Software Customizations, Hello to Customer-Driven Development

The efficient collection of accurate labor, production, and inventory information is vital to success in today's fast-paced manufacturing industry.

This is where barcode data collection solutions come in.

Armed with accurate real-time information, business leaders can make informed decisions that optimize production, improve inventory management and drive profits.

However, all businesses have unique data and process requirements.

Your barcode data collection solution should deliver the information you need while seamlessly integrating with your existing processes and workflows.

Unfortunately, many systems lack flexibility and require significant customizations before they start working the way you do.

Don't Get Caught in a Customization Cycle

Everyone loves a tailored suit, custom kitchen renovation, or perfectly curated road-trip playlist. But ask around and you'll find that few business leaders have warm feelings about their most recent software customization projects.

Software customization is complex. It's time-consuming, expensive and comes with inherent risks. Every custom transaction must be tested and retested, and there's always the risk of introducing bugs.

Customized software is challenging to support and often becomes incompatible with software updates. Your customized software may require significant re-coding each time you upgrade your ERP.

A simple customization project can see several iterations and take months or even years to launch.

It can feel like a bad dream where you're caught in an endless cycle of analyzing, designing, coding, testing, launching and relaunching. Meanwhile, the costs snowball as you are dragged into update meetings, all while you still have a business to run.

It's Time to Break the Cycle

Nutech Systems Viewpoint is a powerful barcode data collection system that integrates seamlessly with Infor CloudSuite Industrial (SyteLine).

Unlike other leading barcode data collection systems, with Viewpoint, there's no need for expensive and time-consuming customizations.

It works the way you do, right out of the box.

Viewpoint ships with 100+ configurable and customer-driven transactions to deliver up-to-the-minute inventory, production and time & labor reporting. Users access a settings menu, like the one on their mobile phone, and turn transactions settings on or off to easily tailor the system to their workflow.

The setup is easy. Within hours of installation, customers will see real-time data flowing from the factory and warehouse floor to Infor SyteLine.

**Empower your business
with efficient, intuitive,
easy-to-use barcode
scanning transactions that
work the way you do.**
