

Viewpoint for SyteLine Enhancements That Can Help Your Business Grow

The software used to drive your business is one of the most important factors in building a successful enterprise. Without constant improvements, a software system can quickly lose its intended value. While updates can take some time to get used to, they undoubtedly improve the efficiency of your business when done correctly.

That is why at Nutech Systems, we continuously push to improve our Viewpoint solution with new features and key adjustments each and every update. Each updated version of Viewpoint for SyteLine is complete with all our current and most powerful software innovations yet.

Outdated software and equipment can be detrimental to the success of your operation. Any version of Viewpoint will thoroughly improve the capabilities of your operation. However, don't let complacency with your current solution disrupt growth and lose you the opportunity to decrease costs.

For all your ERP needs, update Viewpoint for SyteLine to our most current version to avoid a substantial loss of opportunity for your enterprise. Upgrades can be intimidating, but the benefits have the ability to propel your company to the next level. Now, let's take a look at some of the most prominent new attributes featured in our latest version of Viewpoint.

Kit-Builder Picking

This recently developed Viewpoint for SyteLine feature allows for a customer to create a personalized kit that contains multiple items for the same shipment. Whether it's finished parts, additional materials, or anything else related to a project, all of it can be selected and put together as a single, trackable order.

Once your kit is assembled, an order number is assigned to it and the entire package can be shipped out altogether as one item. If your software is holding you back, our Kit-Builder Picking feature could be the solution your business needs.

Multi-Job Pick - Groups Job Consolidated Pick

With previous versions of Viewpoint for SyteLine, a typical directed job pick would involve selecting the parts needed to complete a singular task. While still effective, this process could become tedious for larger projects that involve many interconnected jobs. This is where the new multi-job pick feature can remarkably increase efficiency for your organization immediately.

No matter how large the project, customers can now select parts for each job and have them simultaneously staged for the assembly line. Shipping all your parts together using this feature is a great way to minimize transportation costs and easily keep track of your items. Moreover, save plenty of valuable processing time when using this new Viewpoint attribute.

Multi-job pick is essential for any business looking to close the gap between their warehouse and assembly location. Contact us today to find out just how easy this transition can be.

Multi-Level License Plate Support

Barcode scanning and license plating have always been an integral part of effective warehouse management solutions. Furthermore, multi-level license plating is our new Viewpoint for SyteLine enhancement that takes this process to the next level by reducing the time it takes to transport items on the shop floor and out as freight.

Rather than linking each box or crate to an individual license plate, a user can now layer smaller boxes inside of larger ones and ship them together using an all-encompassing license plate number. This concept of license plate linking allows for seamless transportation of related parts and most importantly, an overall more efficient site floor.

By linking correlated boxes under a unique license plate, a user can move products from Location A to Location B in the warehouse with one simple barcode scan. Furthermore, these crates can then be directly linked to the license plates of the transport trucks, creating our most seamless barcode data collection system to date.

**Empower your business
with efficient, intuitive,
easy-to-use barcode
scanning transactions that
work the way you do.**

SyteLine Enhancements

Integrated Online Help

With any new and complex software system, there are many intricacies that can take a little time to learn how to fully operate. Thankfully, gone are the days of maneuvering your way through endless PDF manuals and online searches. With the latest version of Viewpoint for SyteLine, our Integrated Online Help feature is the perfect way to quickly answer any potential questions.

Now, assistance is literally at your fingertips as your handheld barcode scanner can produce a comprehensive help manual for any situation. Using the DeviceView or EngineView, each drop-down menu produces a list of options as well as a clickable title that directs a user to the Integrated Online Help. Once an HTML appears with the selected support screen, a user can then scroll through the support options and review any page of assistance desired.

Overall Performance

Viewpoint for SyteLine 8.3 helps you work more efficiently by creating a variety of new ways to ship and subsequently track your cargo. While still highly effective to operate with, past versions of Viewpoint lack access to the newest features and enhancements. Don't let your business absorb these easily avoidable drawbacks and upgrade your Viewpoint solution today.

Going through change can be a hassle, but it easily outweighs the costs of using outdated products. Are you ready to upgrade your Viewpoint software? Reach out to us online. There are plenty of reasons why our latest update can lower costs and increase productivity for your business immediately.
