Viewpoint for Infor LX

Viewpoint for Infor LX is a comprehensive solution that works with your Infor LX or BPCS business system to support all warehouse functions.

Using mobile barcode data collection technologies, Viewpoint collects data on the manufacturing or warehouse floor and updates Infor LX in real time. It also provides extended functionality such as license plating, an inventory count module, warehousing, a pick and ship supervisor module, and more.

More Than Just Scanning

viewpoint

See below to discover what Viewpoint can do for you:

Viewpoint for Infor LX supports all warehouse functions including receiving, shipping, put-away, and picking. Because Viewpoint operates in real time, transactions are reflected across IBM i screens as they are scanned.

Optimization & Replenishment
Can use the rules assigned to the location to ensure that pick-faces are replenished and inventory remains available for production and shipping.

Get Real-Time Inventory
Use Viewpoint to update Infor LX and capture accurate inventory in transit, the warehouse, or on the shop floor to improve ordering and eliminate manual searches and counts.

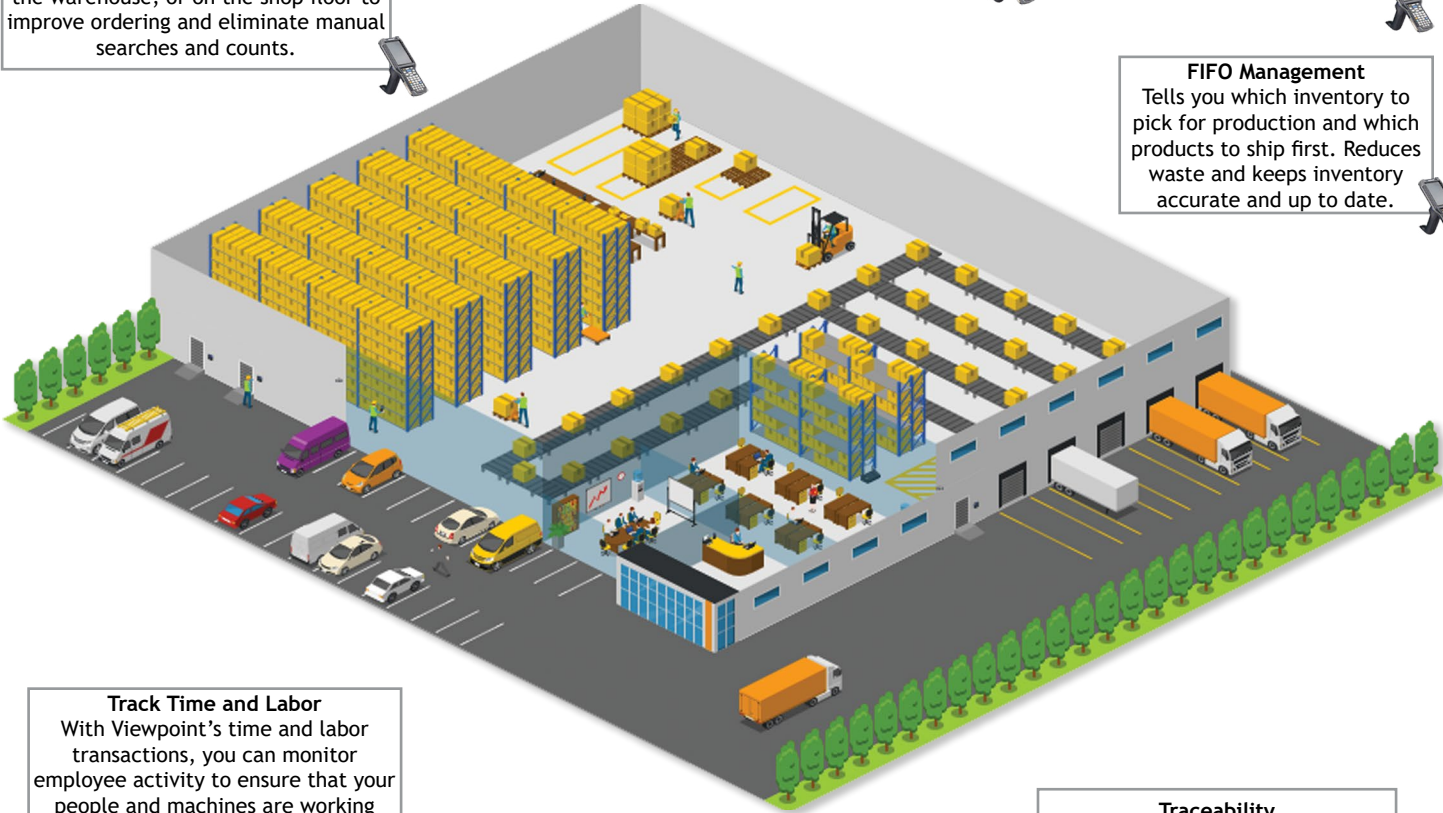

Multi-Bin Stock Locator System
Finds your products and provides the location rules to enforce picking and put-away. Rules can be enforced individually or by any combination of part, age, ABC, material, environment, or physical restrictions.

Receiving Entry
Interfaces to Infor LX's purchase order system. Verifies incoming parts and quantities. Can generate internal labels and use incoming labels. Can interface to EDI from your vendors.

FIFO Management
Tells you which inventory to pick for production and which products to ship first. Reduces waste and keeps inventory accurate and up to date.

Track Time and Labor
With Viewpoint's time and labor transactions, you can monitor employee activity to ensure that your people and machines are working efficiently.

System/User Directed Picking
Orders can be picked based on urgency rather than time entered. The system also helps you to pick what you are near or what the system wants you to pick. The pick scheduler or controller can assist in assigning the tasks to pickers.

Cross-Docking
Viewpoint for Infor LX allows you to ship orders without putting them away and enables your warehouse to meet increased customer demands for order turnaround.

Traceability
All transactions are stamped with a user ID, date, and time. Quickly resolves warranty or bad lot issues through serial and lot numbers.

Automate Label Printing
Use Viewpoint to automatically generate and print labels as part of any process, including receiving, production, and shipping.

Viewpoint Transactions for Infor LX

Do More

Viewpoint for Infor LX provides functionality beyond Infor LX and traditional barcode data collection systems.

Powerful features such as license plating help reduce scan steps while improving inventory accuracy and traceability throughout your operation. The Pick & Ship Supervisor provides the tools to control, streamline, and monitor picking and shipping activities, helping ensure accurate and efficient order fulfillment.

Viewpoint's warehousing transactions support common functions such as FIFO, directed put away, and directed pick, while providing the visibility needed to monitor and improve overall performance.

No Moving Parts

Viewpoint operates on the IBM i, directly alongside Infor LX, eliminating the need for PCs in the middle, dual databases, and slow, error-prone file synchronization.

Because Viewpoint works directly with Infor LX, transactions are processed immediately with no delays on the floor, keeping data accurate and up to date in real time.

By removing unnecessary layers, Viewpoint simplifies your environment and reduces points of failure, resulting in a stable and reliable system that supports your operation day in and day out. As a result, Viewpoint runs continuously with minimal involvement and support from your team.

Nutech Screen Mapper

Viewpoint works within your existing Infor LX environment without modifying programs or writing directly to database tables, helping maintain a stable and reliable system.

By updating Infor LX as if users were entering information directly into the ERP, Viewpoint follows your existing business rules and validation processes while keeping data accurate, reliable, and secure. This helps simplify implementation and makes future system upgrades easier to manage.
